

Global Energy Parliament (GEP) 2021

by Lady Carla Davis, MPH

Specializing in Nutrition

The Global Energy Parliament is organized by the [Isa Viswa Praj-nana Trust](#). It is a registered charitable body functioning in Trivandrum, Kerala, India, since 2000, under the leadership of the Founder and Managing Trustee, His Holiness Jagadguru Swami Isa.

Every year, the Global Energy Parliament(GEP) holds an international session of Parliament. I was honored to be invited and attend the first session in India, in 2010, and then again in 2017. All other years I attended OL, via Zoom. For the past eleven years, I've been a proud volunteer, participant, and strong supporter of the GEP.

It was at the GEP, in Trivandrum, Kerala, that I learned first hand why so many people, from all parts of the world, fall in love with India, in spite of its huge population, over crowded cities, poverty, and pollution. It is because of its rich culture that goes back 10,000 years, and the spirit and passion of the people — young people in particular. More than any other culture, (in general) they have an exceptional attitude and desire to learn, work tirelessly, and master what ever they embark upon. Also, they express immense gratitude and appreciation for every opportunity or generosity that comes their way. Plus, they have strong family values, respect for others, and honor the role of the mother.

India is the 'heart' of the world, as is shown on a map. My time there was an indelible experience and inspiration like no other that will forever be in my heart.

EXCERPTS From the GEP Website:

What Do Parliaments Do?

Parliaments are a cornerstone of democracy. In a nation, they represent the voice of the people, pass laws, allocate funds to implement laws and policies, and hold governments to account. Robust parliaments can help heal divisions in society through dialogue and cooperation. National parliaments also link international and national agendas, ensuring that governments implement international treaties and agreements that they sign up to.

Why Do We Need a Parliament?

The present geo-political dynamic is tenuous, as it is mostly built upon the self-interest of nations. Even in international fora, dialogue and trust are difficult to build and more difficult to maintain. There has been no place for people to come together by identifying first as human beings—citizens of the Earth—to analyse the critical situations facing all of us, and to develop rational, scientific solutions.

What Does The Global Energy Parliament Do?

Rather than passing laws, the Global Energy Parliament is concerned with observing and educating nations and peoples about natural laws. We analyse global problems in the context of the universal laws of energy, the balance and imbalance, and make resolutions and recommendations to national governments about steps they can take to regain or retain the

natural balance.

Every measure suggested is in the interest of all of humanity, as we are all connected. Our GEP resolutions include suggestions for new policies that governments can easily adopt, which are adaptable to their specific conditions.

The GEP global parliament is envisioned to have representation of all peoples around the world. We are proud that we have membership from all continents. Anyone can become a Member of the Global Energy Parliament—for we are all citizens of the Earth and share a responsibility to maintain it. Ministers who are specialists in certain areas are appointed to provide leadership in their portfolios. My role is Minister for Environment.

This year the GEP included two days of Expert Group discussions before the entire House assembled to deliberate upon the draft for the Global Education Policy, on the third day.

From December 10, 11, and 12, as GEP Minister for Environment, I had the great pleasure to participate in the Global Energy Parliament 2021. The focus of this year's Parliament was on Education for Total Consciousness (ETC). This topic is of particular interest to me as an educator. The aim of this GEP is to create a Global Education Policy based on the principles of **humaneness, interconnection, and total consciousness.**

To create a blissful ambience, **ETC's** learning environment incorporates the principals of sacred geometry, along with:

- meditation and a relaxed feeling
- fresh air
- clean natural scents
- beautiful visual surroundings
- full-spectrum daylight
- pleasant color frequencies
- sights and sounds of nature
- a comfortable temperature
- a classroom and building in proportion to the number of students
- a harmonious location and size and shapes of objects
- individual eye contact between the teacher and student
- consciousness

When a student's senses are well nourished and harmonized with nature, he/she feels happy, healthy, and inspired with a sense of well-being. This in turn generates creativity, confidence, advanced learning, and a better more peaceful society.

This ETC methodology of teaching, where the subjective and objective are connected, creates the most harmonious and productive learning environment for a higher consciousness.

To learn more and how this can be implemented read: ***Education for Total Consciousness***, by His Holiness Swami Isa, which can be obtained at: <https://ivpt.org/>, and become of member of the Global Energy Parliament (GEP). <https://www.global-energy-parliament.net>

My GEP presentation on December 11, 2021, **ETC's Learning Environment**, by Lady Carla Davis, MPH can be viewed in the JUNE 2021 issue of MOH.

More than 70 experts in education spoke at this mega three day event. Take a look at our Speakers page on the website to read about each of them and their specialties.

Keynote addresses were given by:

Prof. Asha Kanwar, President & CEO, Commonwealth of Learning
Prof. KV Thomas, Former Minister for Agriculture, India & Chemistry Professor
Prof. Takaharu Tezuka, President, Tezuka Architects.

His Holiness Jagadguru Swami Isa, Founder, of the Global Energy Parliament delighted the audience with his wisdom.

The GEP Speaker was the eminent Dr. CV Ananda Bose, Government and Project Advisor, Author, Educator, Chief Sec. to the Gov. of India, Vice Chancellor to the National Museum University, Chairman of the UN Consultative Body, Rep. for Asia on the GEP Education Commission.

The Question raised to me as Minister for Environment was:

“Respected Minister, having witnessed so many of nature's outcries, education for preserving the environment is now a well acknowledged aspect in many curricula of the world, not least thanks to the SDGs (Sustainable Development Goals) developed by the UN. Do you feel that Education for Total Consciousness is able to achieve this goal?”

My Answer:

NAMASTE His Holiness Swami Isa; Chairman Dr. Nair, Speaker, Dr. Bose; Sec. Dr. Thampan; Honorable Ministers and Government Leaders; Dignitaries; Educators; Members of Parliament; Mira Purn, Students, Rohini, & Susanne.

Thank you for this important question for which I have five points.

#1. Know Your History

Throughout history every great change was started by a small group of people determined and passionate about an issue. Education is the first step in any issue and a big part of the solution. And, **Education for Total Consciousness** (ETC) is leading the world with its unique methodology. When all students learn at an early age that the inner and outer environments are inseparable, many of the world's problems will be resolved. But, this will take time and must be ongoing to educate each new generation.

#2. Identify the Problems & Issues

When I was a student, the environment was not even on the radar, nor discussed in any school. Although we have made significant progress since then, the world now has far more deadly chemicals than ever before. Plus, various industries, including the military, which is one of the world's worst polluters, use their positions of power and money to corrupt and influence governments, regulators, and other decision makers.

Hence, the majority of citizens are at the mercy of large corporate monopolies, duopolies, or oligopolies. While it is overwhelming, it is not hopeless.

#3. Learn the Formula and Plan the Strategy

We as consumers have one big power left, which is our economic power. Each one of us must commit to using our economic power and walk the talk.

Before you buy anything, ask yourself three simple questions:

- **Is it environmentally friendly?**
- **Is it conducive to good health?**
- **It is pleasing to the eye?**

#4. Solutions

To combat globalization, environmental degradation, loss of freedom and liberty, and to regain your power: **Decentralize, Connect with Nature, and Raise Your Consciousness.**

In addition to using your economic power, this means, buying locally and supporting small businesses and small family farms. And, stop buying from large corporations.

Become a member of the **Global Energy Parliament** <https://www.global-energy-parliament.net/> if you have not already done so, and unite with **World Beyond War** at: <https://worldbeyondwar.org/>. Most people don't realize that war and the hundreds of military bases around the world are the worst polluters with no oversight. The agriculture industry is another one of the largest polluter because of all the toxic chemicals they use. So, buy ORGANIC and be very selective with what foods you consume. And, that means not buying anything with added sugar, for starters, as sugar is one of the worst polluting crops of both the inner and outer environments.

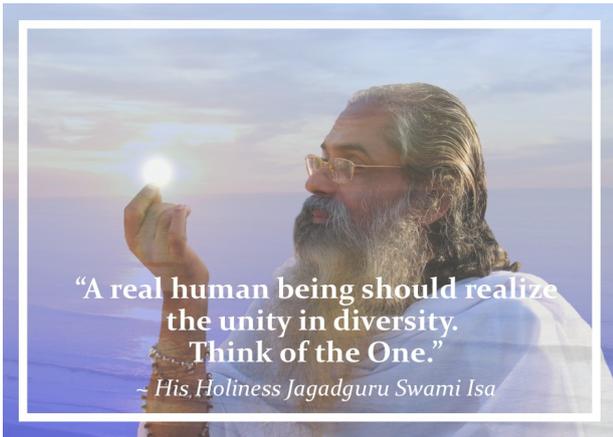

Stay informed with:

To empower yourself with knowledge, read **Toxic Legacy**, by Dr. Stephanie Seneff, PhD (MIT Senior Researcher) at: <https://stephanieseneff.net/>, and **What's Making Our Children Sick**, co authored by Dr. Michelle Perro, MD (Pediatrician) <https://drmichelleperro.com/> & <https://www.chelseagreen.com/product/whats-making-our-children-sick/> and **Masters of Health eMagazine**, which is free OL at: <https://MastersOfHealthMag.com>, where you will learn about other dynamic organizations and people of like-mind that you can link up with.

#5. Connect and work with Nature — not against it. Nature rules and has all the answers and solutions which have evolved over millions of years. Nature always wins in

the end. Listen again and learn from to the many inspiring presenters at this GEP 2021. Everything has been recorded, and I believe they will be made available for free on YT and their site: <https://www.global-energy-parliament.net/>.

Now, are you all ready to commit?

The seeds have now been planted, and it is up to us humans to nurture these seeds to bear fruit for a sustainably better world for humanity and future generations.
